PROFESSIONAL SUMMARY

Senior Unreal Engine Engineer with 4.5+ years of experience designing and developing gameplay systems, multiplayer features, production tooling, animation frameworks, and scalable Unreal Engine applications using C++ and Unreal Engine 4/5.

Experienced in gameplay architecture, Gameplay Ability System (GAS), multiplayer replication, Motion Matching, State Tree, editor tooling, REST API integrations, and production-scale content pipelines. Strong track record of owning technical systems from prototype through production while collaborating across engineering, design, animation, art, and production teams.

CORE TECHNOLOGIES

Engine & Programming

- Unreal Engine 4.27 / 5.1 / 5.3 / 5.7 / 5.8
- C++
- Blueprint

Gameplay & Systems

- Gameplay Ability System (GAS)
- Gameplay Architecture
- State Tree
- Gameplay Event Scheduling
- Save & Progression Systems
- Data-Driven Systems

Animation

- Motion Matching
- Animation Retargeting
- Linked Animation Graphs
- Sequencer
- Take Recorder

Multiplayer

- Replication
- RPCs
- EOS
- Server Authority
- Multiplayer Gameplay Systems

Tools & Integration

- REST APIs
- AES Encryption
- Gameplay Tooling
- Workflow Automation
- Git
- Jira

AI-Assisted Development

- Generative AI
 - Technical Research
 - Documentation Generation
 - Debugging Assistance
 - Rapid Prototyping
-

PROFESSIONAL EXPERIENCE

Arrise Solutions Pvt. Ltd.

Senior Game Developer / SDE-1 [Sep 2024 – Present]

Football Virtual Sports (UE5)

- Architected and developed a Football Virtual Sports prototype from scratch that was approved for full production.
- Owned gameplay engineering systems including player systems, ball systems, camera systems, UI systems, and gameplay orchestration.
- Designed and implemented a Data-Driven Gameplay Sequencing Framework that became a core content production pipeline.
- Enabled animators and content teams to independently author gameplay scenarios through configurable gameplay data.
- Reduced gameplay sequence creation time from approximately 7–9 days to nearly 2 days.
- Improved production scalability through parallelized animation, baking, and gameplay integration workflows.
- Collaborated with animation, design, art, backend, and production teams on feature planning and technical feasibility.
- Mentored developers, reviewed code, and contributed to technical decision-making.

Tennis Virtual Sports (UE5)

- Developed gameplay systems including player systems, camera systems, gameplay scheduling systems, and sequence integrations.
 - Extended reusable gameplay sequencing technology across multiple sports simulation projects.
-

EDIIE / Dhi Tattva Solutions Pvt. Ltd.

Game Developer [Dec 2022 – Jul 2024]

Multiplayer Interactive Simulation Platform

- Developed multiplayer gameplay systems and backend-integrated progression features for shared interactive experiences.
- Designed modular systems for rewards, progression tracking, analytics, and gameplay state management.
- Refactored tightly coupled gameplay systems into scalable modular architectures.
- Developed encrypted local/cloud persistence systems using API-driven workflows.
- Implemented AES-based encryption and server-authoritative validation systems for progression security.
- Built reusable tools and workflow automation systems used across multiple projects.

Multiplayer Battle Royale

- Developed gameplay systems using Unreal Engine networking and EOS.
- Implemented traversal systems, crawl movement, healing systems, storm systems, item spawning systems, and gameplay mode functionality.
- Worked extensively with GAS, replication systems, animation systems, retargeting workflows, and multiplayer synchronization.
- Collaborated with designers, artists, animators, and QA teams throughout development.

Infinite Runner

- Shipped a mobile Infinite Runner title.
- Developed achievement systems, progression systems, and backend integrations.
- Refactored Blueprint-heavy gameplay implementations into optimized C++ systems.

Additional Contributions

- Conducted internal Unreal Engine mentoring and technical training sessions.
 - Developed high-performance AES encryption and decryption utilities.
 - Built scientific simulations and interactive educational experiences.
-

Practically / 3rdFlix Visual Effects Pvt. Ltd.

Game Developer [Sep 2021 – Oct 2022]

- Developed interactive simulations and gameplay experiences for educational products.
- Built reusable gameplay templates and frameworks used across development teams.
- Collaborated with designers, artists, SMEs, and QA teams throughout project lifecycles.

- Mentored junior developers and supported implementation, debugging, and optimization efforts.
-

SELECTED PROJECTS

Football Virtual Sports

Production-approved Unreal Engine 5 sports simulation featuring a custom Data-Driven Gameplay Sequencing Framework, animation orchestration systems, Motion Matching, and scalable gameplay architecture.

OpenSeason

Multiplayer Battle Royale

Epic Games Store:

<https://store.epicgames.com/en-US/p/openseason-75e993>

Key Contributions:

- Gameplay systems
- Traversal mechanics
- GAS integration
- Multiplayer features
- Replication systems

Infinite Runner

Google Play Store:

https://play.google.com/store/apps/details?id=com.vulcan.runner&hl=en_SG&pli=1

Key Contributions:

- Gameplay systems
 - Achievement systems
 - REST API integrations
 - Progression systems
 - Performance optimization
-

EDUCATION

Bachelor of Technology (Information Technology)

Manipal University Jaipur
